PitBull 800™

PitBull 1500™

With over 25 years of experience in designing and manufacturing reliable process equipment, Elgin recognizes the need for reliable and efficient submersible feed pumps. Elgin's versatile pumps support a wide variety of applications for the trenchless and geothermal industry. Elgin's PitBull™ line of solids-handling pumps have been designed to reliably handle a myriad of solids-laden fluids with minimal maintenance. Elgin offers pumps ranging from 400 up to 1,500 gallons per minute capacity.

Based on one of the industry's most field-proven pump configurations, Elgin's PitBull™ line of submersible solids-handling pumps offer a trouble-free, non-clogging design with top discharge port for heavy-duty applications. Featuring a cast iron structure with steel strainer, high chrome alloy impeller and agitator, easy access oil maintenance port and power cable safety chain coupling. Safety features include 'Circle Thermal Protector' and 'Motor Coil Protection' that shut the pump down in event of motor overheating.

Hose Coupling

Each pump is fitted with a cast iron hose coupling connection.

Cable Protection

Each pump comes standard with electric cable coupling to prevent power separation from pump.

Rugged Design

Designed for heavy-duty applications, Elgin pumps feature a steel strainer and high chrome alloy plated impeller, agitator and inlet plate.
